Dato: 16JAN 78 by: 022

I. INTRODUCTION

The writer of this report monitored the initial offering of the OTR ELINT Course from 2-23 October 1959. Due to a previous obligation to conduct my own course of Instructional Techniques during 19-23 October 1959, I was not able to personally monitor the last week of PPS, assisted in the monitorthe ELINT Course. Mr. PPS, assisted in the monitoring of this course and particularly covered the period 19-23 October 1959. Comments related to the third week of the course are his. Many of the other comments contained in this report are the consensus of and myself. Mr.

25X1A9a

II. STIFFCTHS

25X1A9a

Chief Instructor, ELIM Course, deserves considerable credit and commendation for the work he has performed in organizing this course. Mr. . . in "starting out from scratch" has had to perform considerable research and ground work in organizing this course. This was an uniquely difficult task to perform because of the varying conflict and complexity of interests between the components asked to participate. The guest speakers generally represented the top or deputy position from the components and presented the official policies and procedures in actual Agency operations.

25X1A9a

Several of the speakers commented openly in their presentations that Mr. and OTR should be complimented for their contribution to the Agency in gathering together the information and personnel. representing the many divergent interests in this field within the Agency. In the panel sessions on several occasions, statements or decisions were made by responsible personnel which will improve the future ELIM activities with the Agency

25X1A9a

A point to be emphasized is the fact that, if nothing else was accomplished by the formation and running of this course, CTF has performed a major step in pointing out to the many personnel with hi hly diversified and specialized interests working in ELINT the real need for establishing Agency ELIMT Doctrine in order that all the diversified offices and personnel will be in accord.

SELFL

It must be noted that the first running of any course usually brings to light many problems not enticipated prior to the running. It is assumed that after neveral runnings of this course many of these problems will be easily surnounted.

#### III. COURSE OBJECTIVES

The Chief Instructor gave the following as the course objectives:

- "1. Give sufficient knowledge of technical background so that students understand the language of professional colleagues and realize the dimensions of the problem.
- 2. Explain the capabilities, limitations, and delicaty of the equipment to be used so as to cooperate with their collegues in its employment.
- 3. (live comprehensive picture of operations and the intelli-
- 4. Explain all processes of ELIMT from collection to analysis and its interpretation.
- 5. Make the student acqueinted with all supporting organimations that can aid them in the field.
- 6. Let the student see and know all the instruments of collection.

## 25X1A6a THAINING ON THAINING

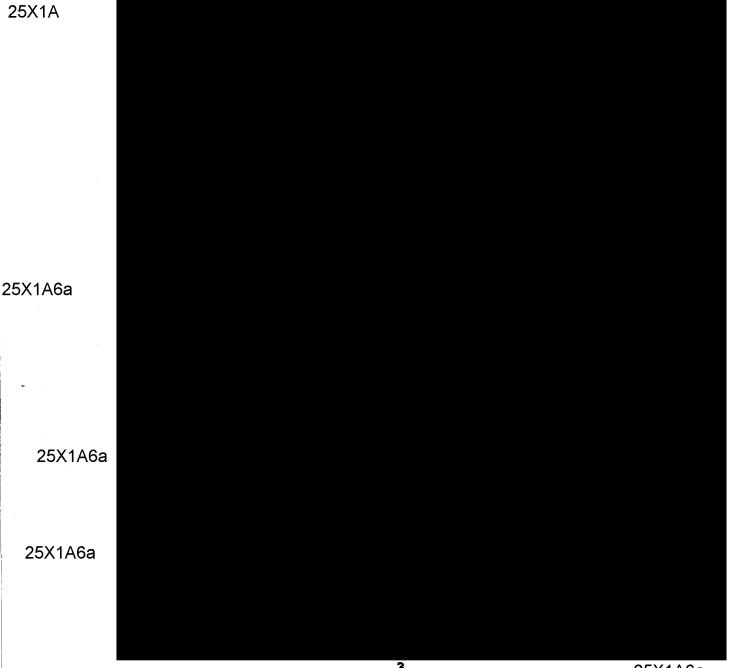

- \*1. Develop a better understanding of electricity theory and fundamentals.
- 2. Develop a better understanding between technical and operational control of a problem.\*

## V. SUCCESTIONS FOR DATE OVERENT

The following suggestions are made with the full knowledge of the many implications inherent in organising this occase and particularly with respect to the initial running of any course. These suggestions might then be considered with the intent that they would serve as stimuli to the Chief Instructor and his associates for consideration in future course presentations. Further, they have been discussed with the Chief Instructor prior to being placed in this memorandum. Order of listing in this memorandum does not imply order of importance.

## Selike!

A. Assuming that the subject matter taught in the first running (see Attachment A) will be retained in the next several runnings, it is suggested that the sequence of subject matter be revised as outlined in Attachment B. The purpose of this revision would be to present the material in a more logical sequence with respect to a gestalt aspect, i.e., understandings, attitudes, and meanings are first schieved through insight and later clarified through further experiences and applications.

3

25X1A

I. Include in the student reading kit, copies of MSCID #5 and #6, BCID 6/22 (or pertinent sections therein), and the Detaher 1957 National Geographic article "Cape Canaveral 6000 Kile Shooting Callery".

25X1A

- J. Submit the statemt reading kit to DD/P, Commo, OS?, PIC, or others so that these components may examine the present materials which should be included or perhaps replace present material.
- X. The Chief Instructor might produce some case histories (sanitised) for inclusion in the reading hit and class discussions. The Chief Instructor indicated that he has tried to obtain such histories but because of the nature of the subject, various offices would not release such infernation. Ferhaps since the course has run one time, emother effort might pay off since the various offices might be more willing to assist in this effort or perhaps some "efficial" pressure might be applied at the right places.
- L. A band-out to each student night be prepared which would give names, title, and phone numbers of the various personnel associated with ELINT policy and operations in Readquarters. Such a kind-out might even go so far as to include brief statements as to capabilities or areas of interest wherein such personnel could assist in FLINT planning. This would allow each student to make a direct contact in the event be required future assistance in his work.
- M. The Chief Instructor whould obtain from the guest speakers their training photos, charts, maps, diagrams, and etc. use i in this course and have transparencies produced by OTR Visual Aids shop for use on the Yu-Graph.

7

- ascertain whether or not some of them would be apprepriate for this type course. Further, these and many of the films shown during 5X1A6a the day could easily be shown at night with the resultant saving of day-training time which could be devoted to more practical aspects of the gear and equipment operation.
- O. It is estimated that the Chief Instructor could personally teach a great pertion of the subjects in this course given at Headquarters. By doing this and the subsequent elimination of a high number of guest speakers, the inherent weaknesses associated with most guest speakers would be eliminated or at least reduced to a considerable extent. This is not in any manner considered a criticism of the obvious high degree of qualification of these speakers in their own technical areas. Many of these speakers are not highly proficient public speakers or instructors and their material was not organised for instructional purposes. Such weaknesses apparent in the first running of this course would include the following:
  - 1. extent of overlap between speakers;
  - use of terminology familiar to the speaker but not known or not defined to the student;
    - poor method of delivery; monotone voice;
  - 4. poor organisation (or even a lack of organisation); points of speech not clearly defined and noted:
  - 5. lack of training aids to supplement speech; poor use of training aids; use of charts, etc. which were cut-of-date, inaccurate, incomplete; lack of proper training aids for this size class; passing among the class of hand-outs, pictures, etc. while the speaker was talking;
  - 6. attitude of trying to "sell" an office policy, procedure, etc.
- P. The first hour of instruction on Monday of the third week was good. It brought out the need for the CIA ELINT complex to publish some sort of operational aid or handbook for ELINT Case Officers. This publication should give such basic information as:

SIR

#### VI. GENERAL COMMENTS

25X1A

- A. Several lectures lasted for more than one and one-half hours without allowing a break. It would be wise to divide such a lengthly presentation.
- B. Attachment C was developed to assist the Chief Instructor to more adequately obtain factual opinion and information from the students during the course critique in the third week. The resultant information will be retained by him and considered with respect to any course modification for subsequent runnings.

D. Consideration right be given to including this course within the same school frame-work as the SMT course since there might be some commonality between instructor personnel which would lend itself to cross-training or use of instructors.

SIGNED 25X1A9a

#### GENERAL AREAS

- 1. What is your opinion of the technique of having guest lecturers offer the majority of the second week?
- 2. What value did you receive from the several panels offered during the second week?
- 3. Should mere opportunity be offered for some types of student participation or activity, other than the question/answer or panel periods provided? If so, what do you suggest?
- 4. Should this have been a course which attempted to teach you more specifics related to EJINT operation? (For example: more training in actually planning a sample EVINT operation to meet stated requirements: 25X1A6a more experiences in actually operating some of the "agent type" gear more work on case histories of ELINT operations if they are available and the like) If so, explain your ideas.

### S-E-C-R-E-T

. 3 -

5. What suggestions do you have as to subject matter or material that should be included in this course in order to equip the CC to handle ETINT operations more effectively?
